### Cumulative Returns

### Investment Strategy

The Nucleus Tactical Income Model invests in a combination of Australian and International equities but is heavily weighted towards cash and fixed interest. The portfolio takes minor tactical tilts to different asset classes based on valuation. Stocks are chosen with a value and quality bias.

All positions are currently implemented through physical investments. Rebalancing is considered at least monthly by the asset allocation committee. The committee often takes a longer term view on assets and will choose to gradually build positions with dividends/excess capital rather than actively trading wherever possible.

1. Portfolios with low balances may deviate performance due to share parcel sizes. 2. Based on strategic asset position. May be higher/lower based on tactical positions. 3. Inception is 31 July 2017. 4. Administration fees vary on account type, amount invested and platform used. See PDS for details. 5. Vanguard Diversified Conservative ETF. Chant West equivalent used Jul-Nov 2017.
